Technology, Mymensingh**

Project profile

❖ Name

Online shopping management system.

❖ Front end

Html,css,Bootstrap,javascript,ajax.

❖ Back end

Oop ,php ,mysql.

About the Online Shopping management system

- ❖ An online shopping system is a virtual market place on the Internet where customers can browse the catalog and select products of interest.
- ❖ The selected items may be collected in a shopping cart. At checkout time, the items in the shopping cart will be presented as an order. At that time, more information will be needed to complete the transaction.
- ❖ Usually, the customer will be asked to fill or select a billing address, a shipping address, a shipping option, and payment information such as credit card number. An e-mail notification is sent to the customer as soon as the order is placed.

Feasibility study

Technical feasibility

Technical feasibility involves how difficult will be to build and whether the firm has enough experience using that technology.

Operational feasibility

Is a measure of how well a proposed system solve the problem user satisfies the requirements .

Scheduler feasibility

Typically this name estimating how long he system will take to develop .

Current system

❖ Disadvantage_

- ✓ Manual system.
- ✓ More paper work.
- ✓ Time consuming.
- ✓ Not more secure.
- ✓ Not centralized system.
- ✓ More rate of error.
- ✓ No information about all product. __

Proposed system

❖ Advantage

- Customer need not have to be member for seeing product information.
- Details of inquiries made by customer also shown to administrator and employees.
- Response is given to the customer based on the inquiry type.
- Customer can navigate through the site and see the product information without paying .
- Customer feedback is given to the employee.
- Customer has to be logged in for making an inquiry for any products.

Hardware requirements

- Processor Pentium 4 or later
- System memory 512 mb
- Hard disk 20 GB or above

Software requirements

- Server-side Language OOP PHP
- Client-side Language HTML, CSS, Bootstrap, Javascript, JQuery , Ajax
- DBMS Mysql
- IDE Netbeans

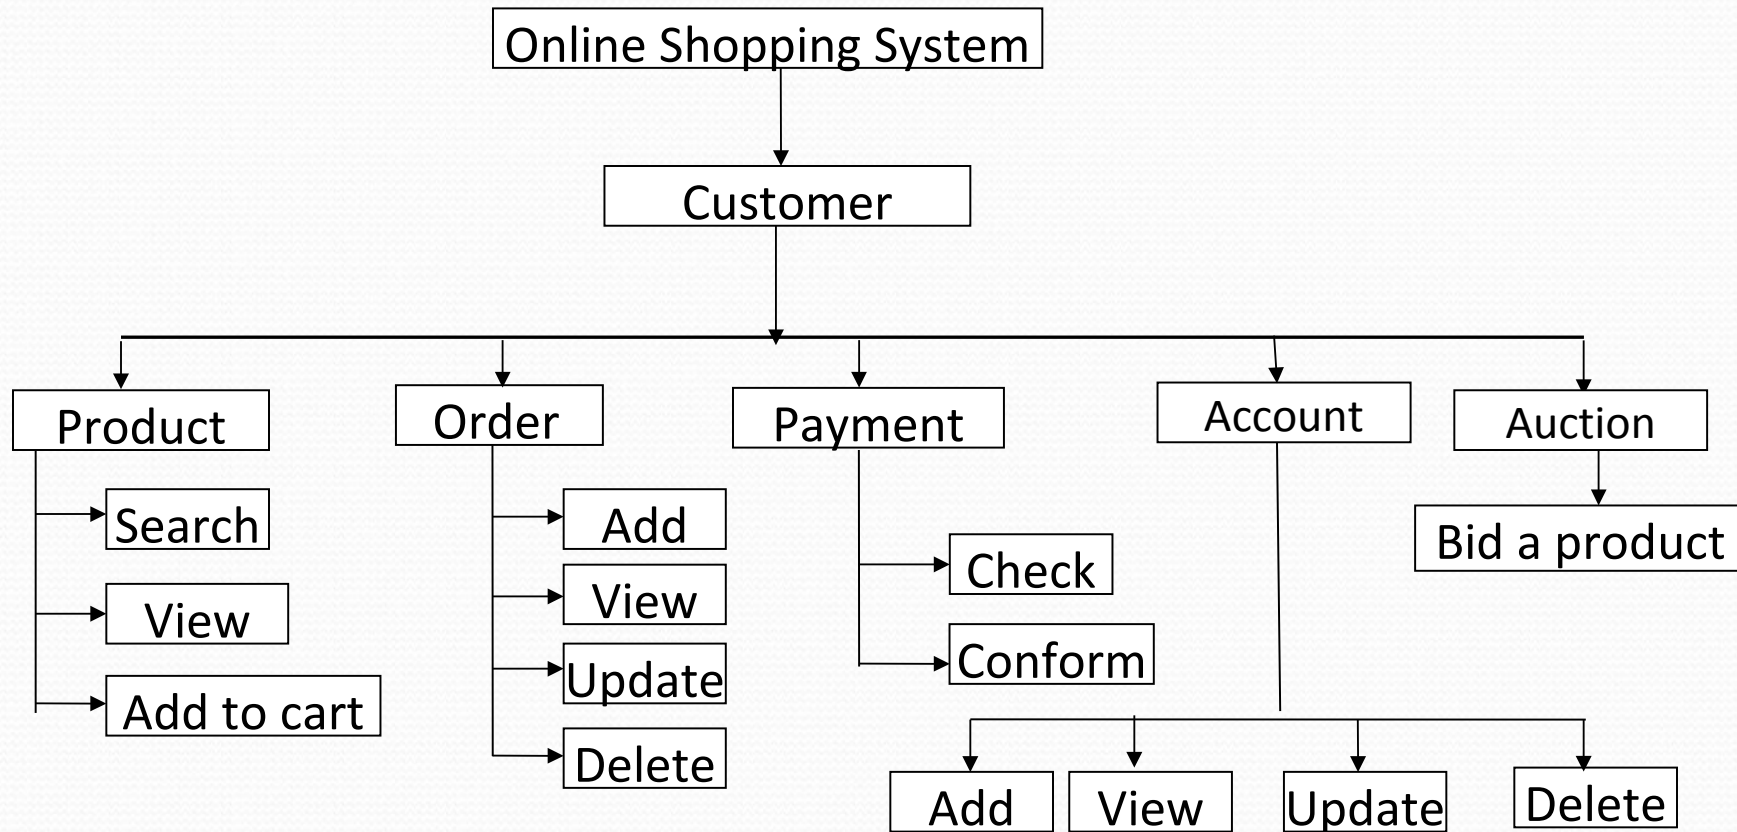

Strategy used in this project

BUSINESS-TO-CONSUMER (B2C):

- It is the model taking business and consumers Interaction. The basic concept of this model is to sell the product online to the consumers.
- B2C is the direct trade between the company and consumers. It provides direct selling through online. For example: if you want to sell goods and services to customer so that anybody can purchase any products directly from supplier's website.

Database Design : Table

Table Design for **Products**

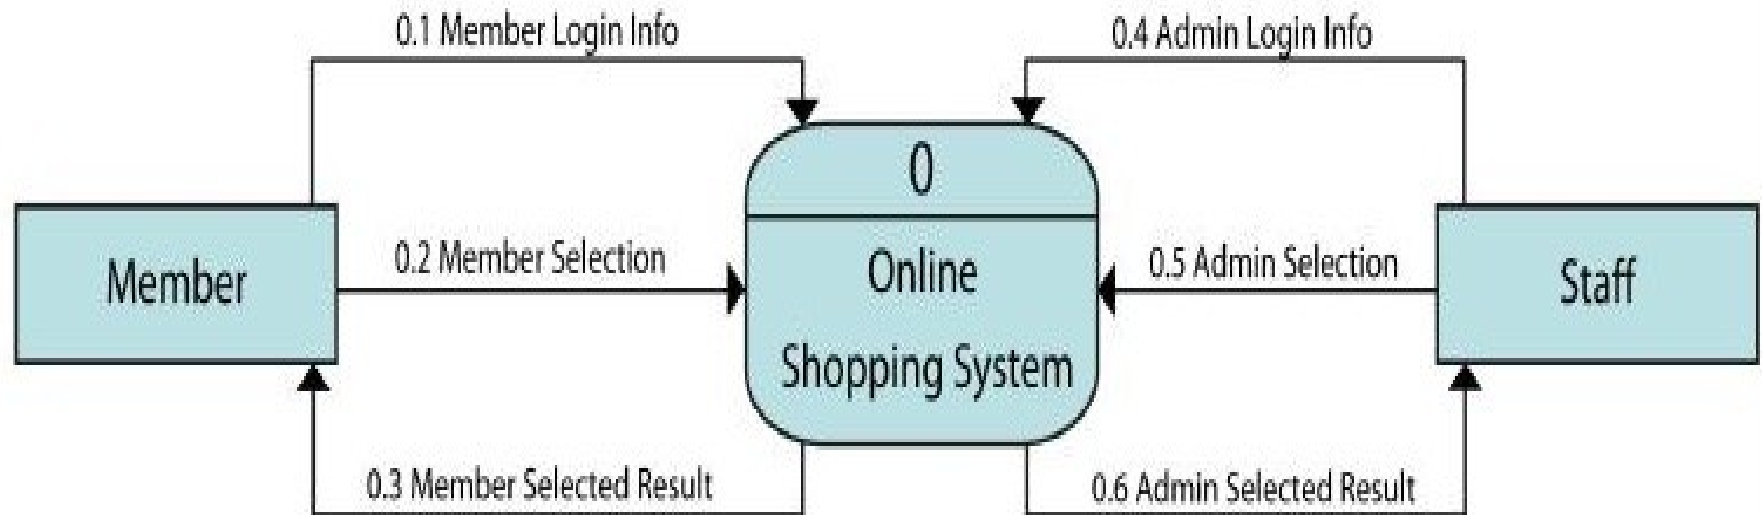

Field Name	Data Type	Size	Justification	Format	Example
Product ID	Alpha Numeric	8	This is a unique key for each products identification	PRO####	PRO-0012 PRO-0065 PRO-1452
Products Name	Text	30	This field keeps the name of the products		Nokia, Sony Ericsson
Category	Text	15	This field keep category of products		Mobile, Computer
Purchase Price	Number	Integer	Products price is store in the field		10024 15478
Sell Price	Number	Integer	This field record the products selling price		10200 16000
Description	Text	100	This field describe the products description		It is non serial

Future Plan

On this topic further study must be needed future development for:

- Will make more dynamic for the user.
- Will make the site more popular add Auction.
- Will make more user interactive.

Conclusion

- This is design with kipping quality assurance at extreme the system is developed with the latest technology with the aspects of oop php integrates utilities with keep ahead from the current area.
- The documentation of the system is developed in the view of re-engineer purposed.re-engineering and the ability of system to prove efficiency in timely manner for every long period.

THANK YOU
